adj

conj

Section 4 — Summary Variables

LIWC-22 Summary Variables

Analytic · Clout · Authentic · Tone are NOT present in this run.

These four scores are computed by LIWC-22 from a proprietary regression model trained on the built-in English dictionary. They do not generalise to external dictionary files, so LIWC-22 omits them when a .dicx file is supplied (as here, with the Dutch LIWC-2015 dictionary).

See [output/liwc_validation_report.pdf](#), Section 3, for detail.
